

The Constituencies behind Tamil Nadu 2026 Verdict

234	Assembly Seats	118	Majority Mark	3873	Candidate Count (Down from 3885 in 2021)
-----	----------------	-----	---------------	------	--

Aggregate Seat Count of Alliances

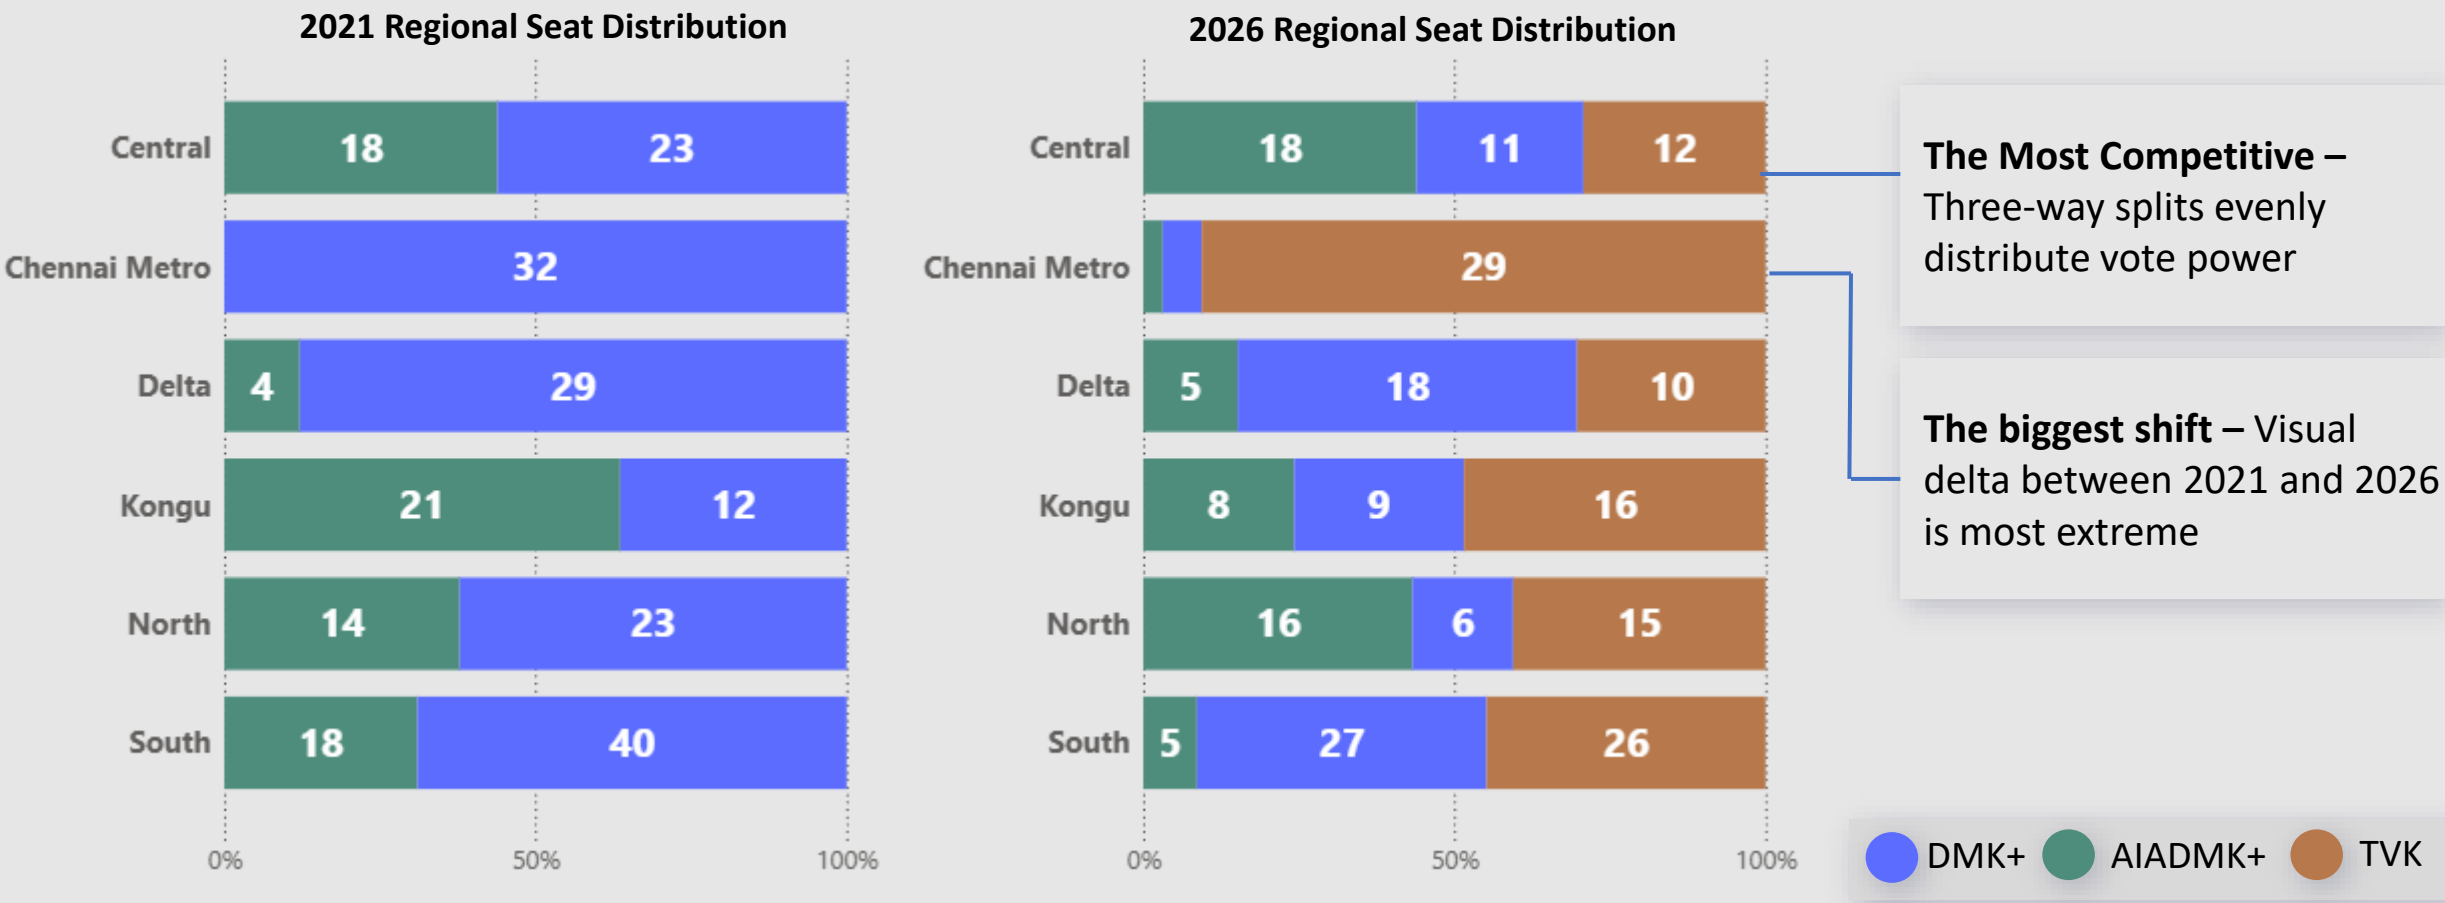

The 2026 landscape moved from a traditional bipolar contest between DMK+ and AIADMK+ to a tri-polar environment with the significant entry of TVK

Editorial Recommendation

Focus the opening of the show on the transition to a tri-polar electoral landscape to set the stage for the statewide shift

This sets the foundation to examine exactly where these new power centers emerged on a regional level

The Regional Battlegrounds – Mapping 2026 Realignment

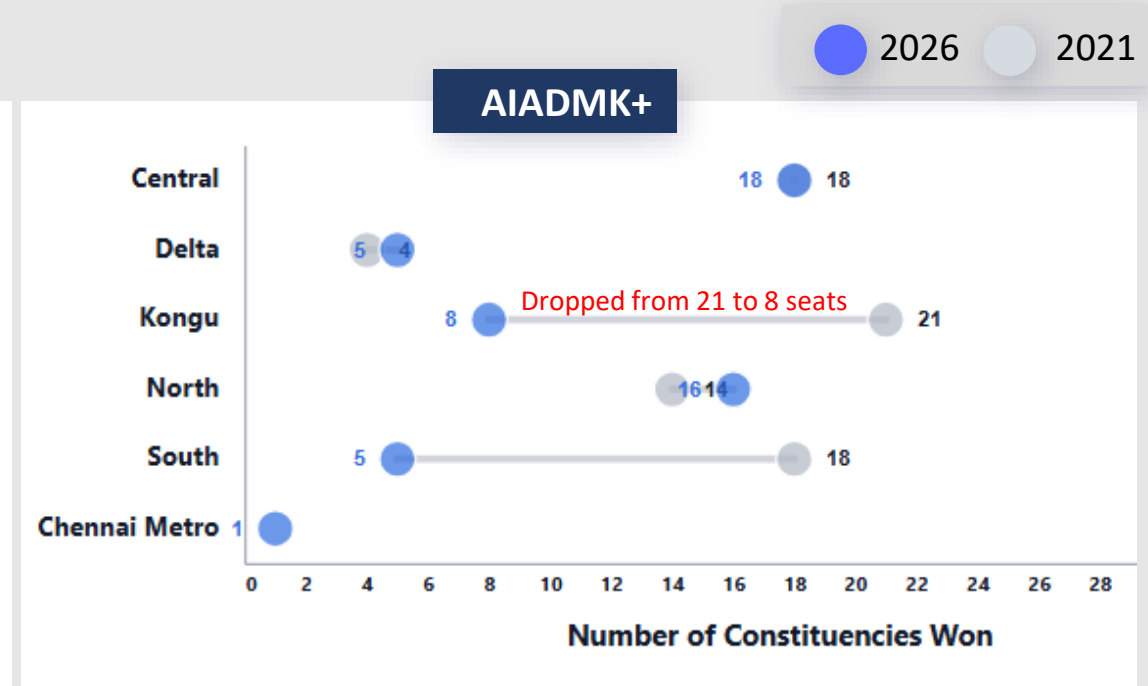

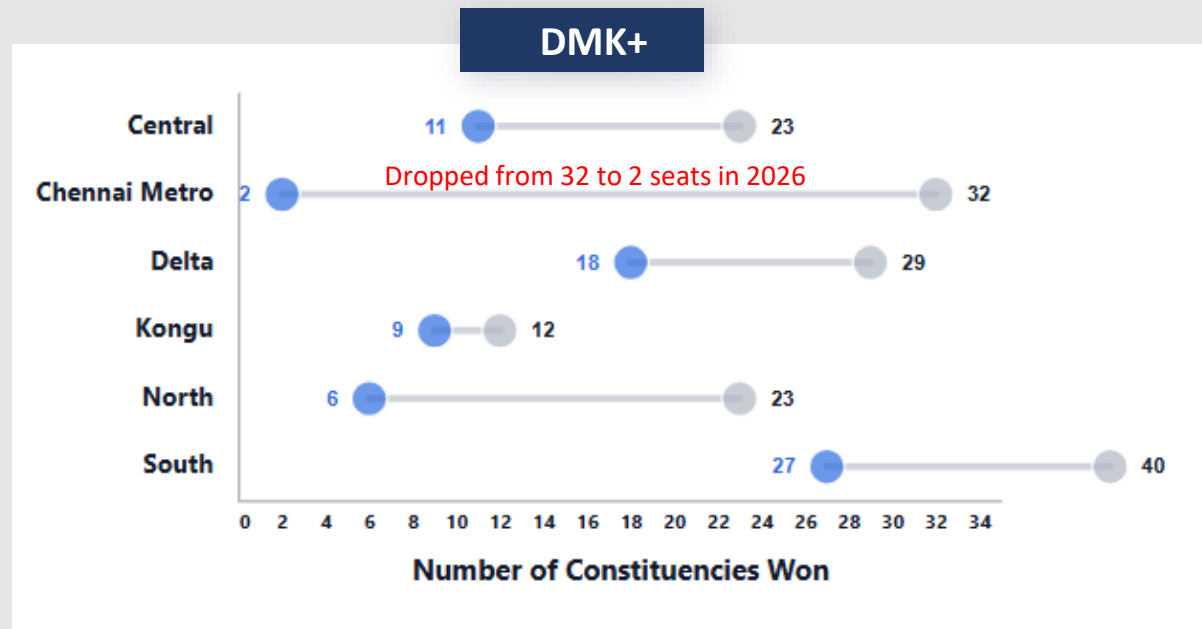

Editorial Recommendation

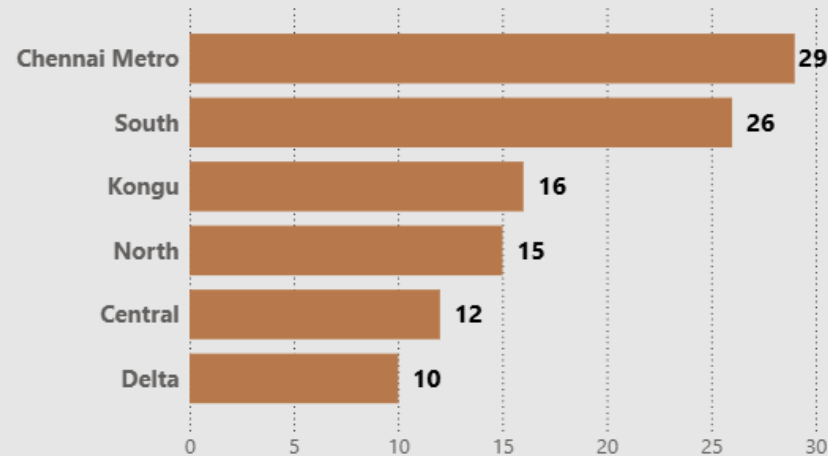

Utilize regional data comparisons to provide geographic context for the shifting seat distribution across alliances
This regional view leads into a deeper look at where established strongholds began to erode

Regional Seat Erosion in Strongholds

TVK's Emergence in 2026

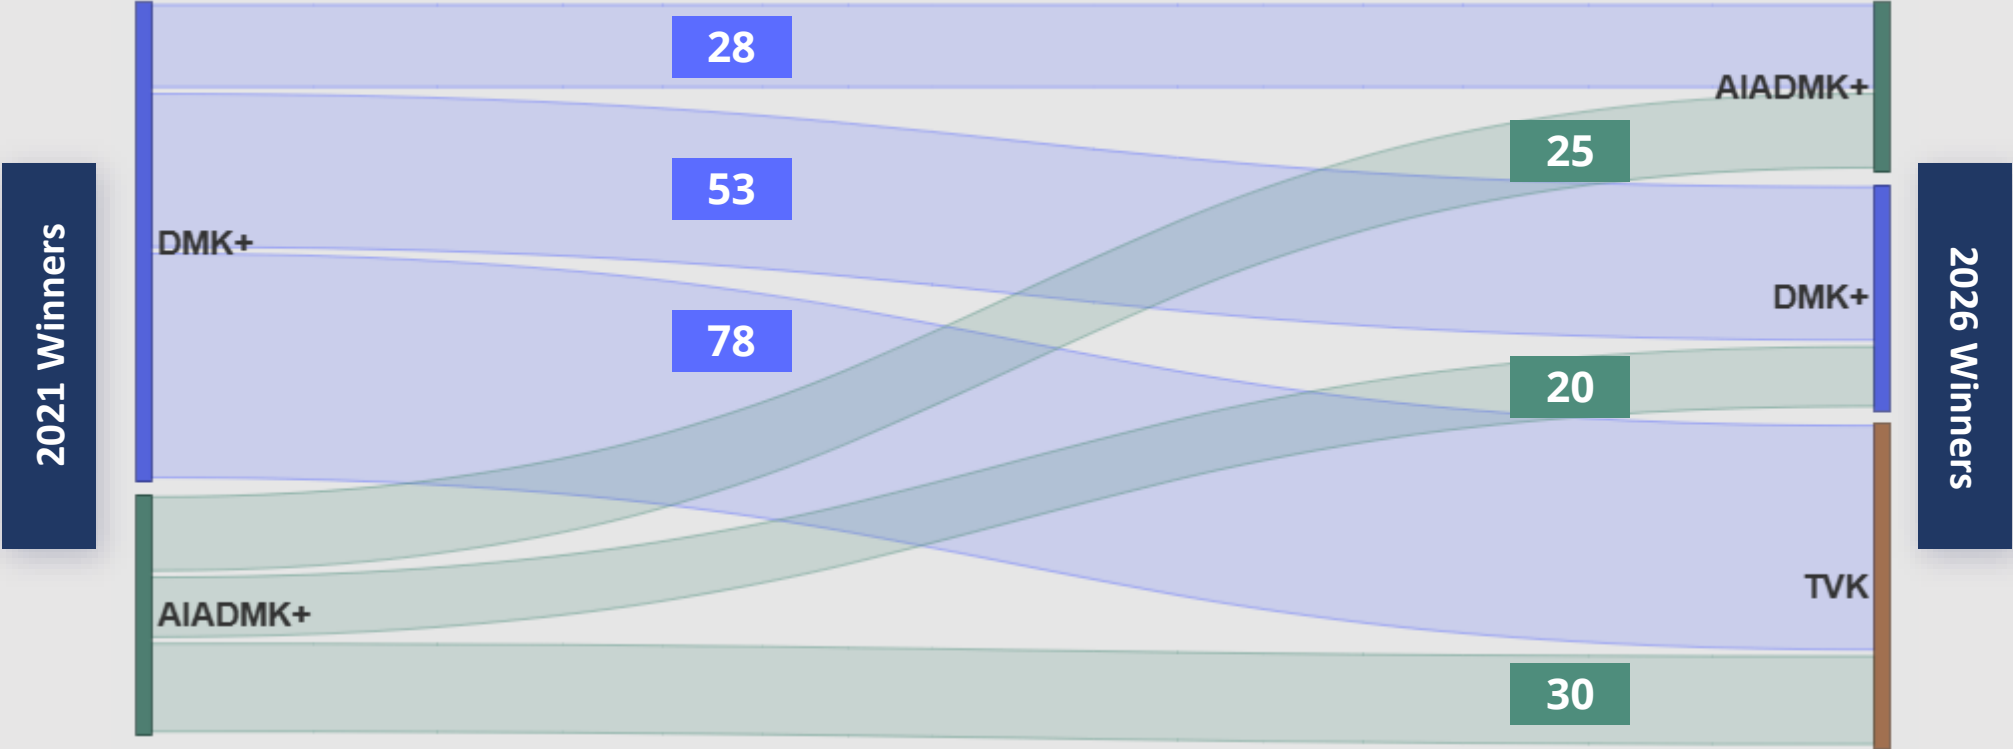

Editorial Recommendation

Position significant seat erosions (e.g Chennai Metro) as the primary editorial hook for the broadcast

After seeing where seats were lost, we will now look at exactly which parties those seats shifted toward

The Great Flip: Flow of Political Power

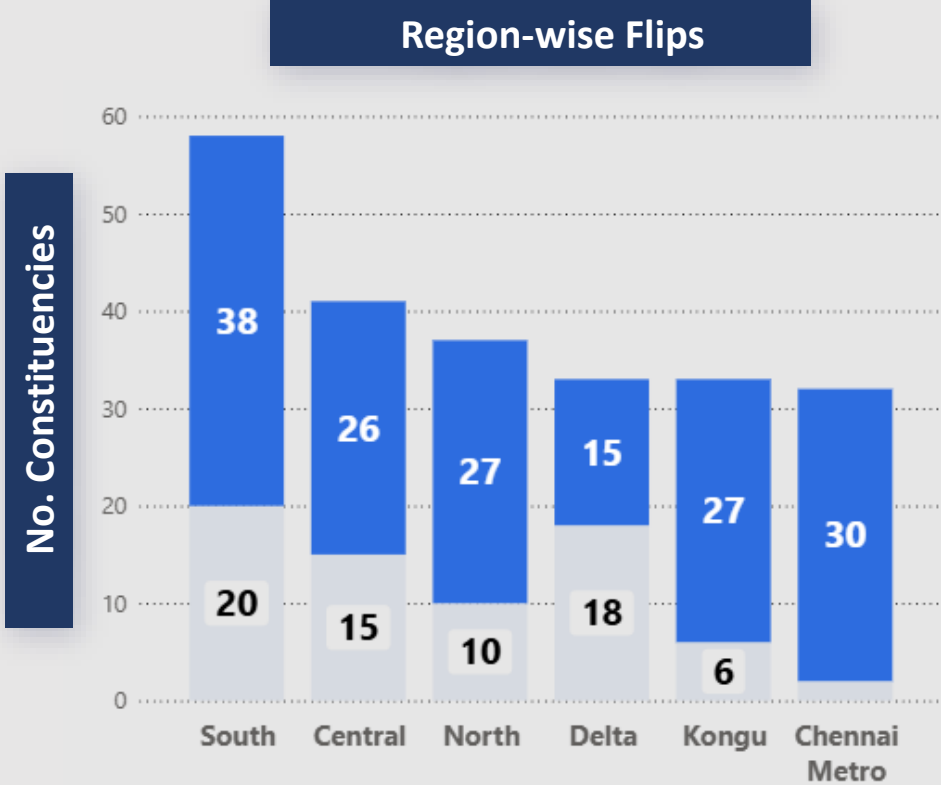

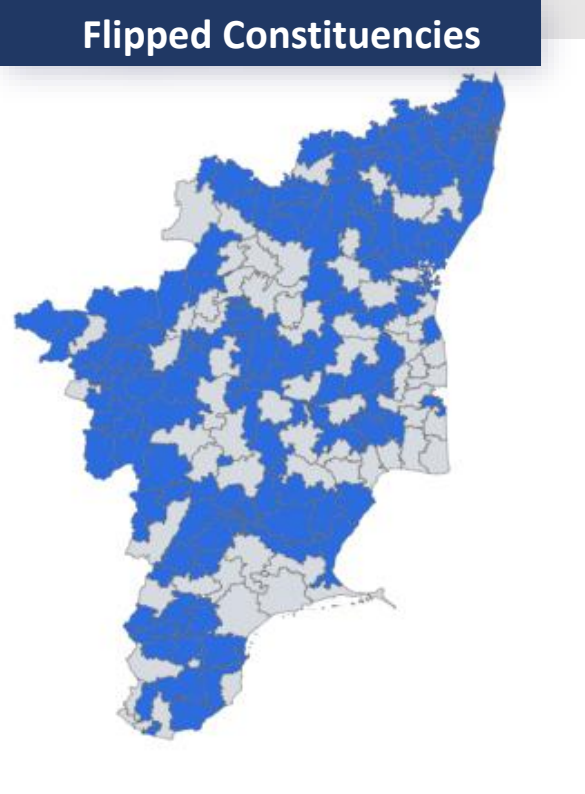

A large-scale redistribution occurred as seats previously held by DMK+ and AIADMK+ shifted toward TVK
This flow of power indicates that the 2026 verdict was not just a marginal change but a major realignment

Editorial Recommendation

Focus on the structural shift between alliances to show the scale of the state's new tri-polar realignment
This party-level movement sets the stage for our next look at the specific location where these shifts actually happened

A New Map: See Which Constituencies Voted Differently

163 | Total Flipped Constituencies (69.7%)

The geographic map of Tamil Nadu has been redrawn, with massive redistribution of political control across most districts

The South region recorded the highest count of flipped constituencies in the state

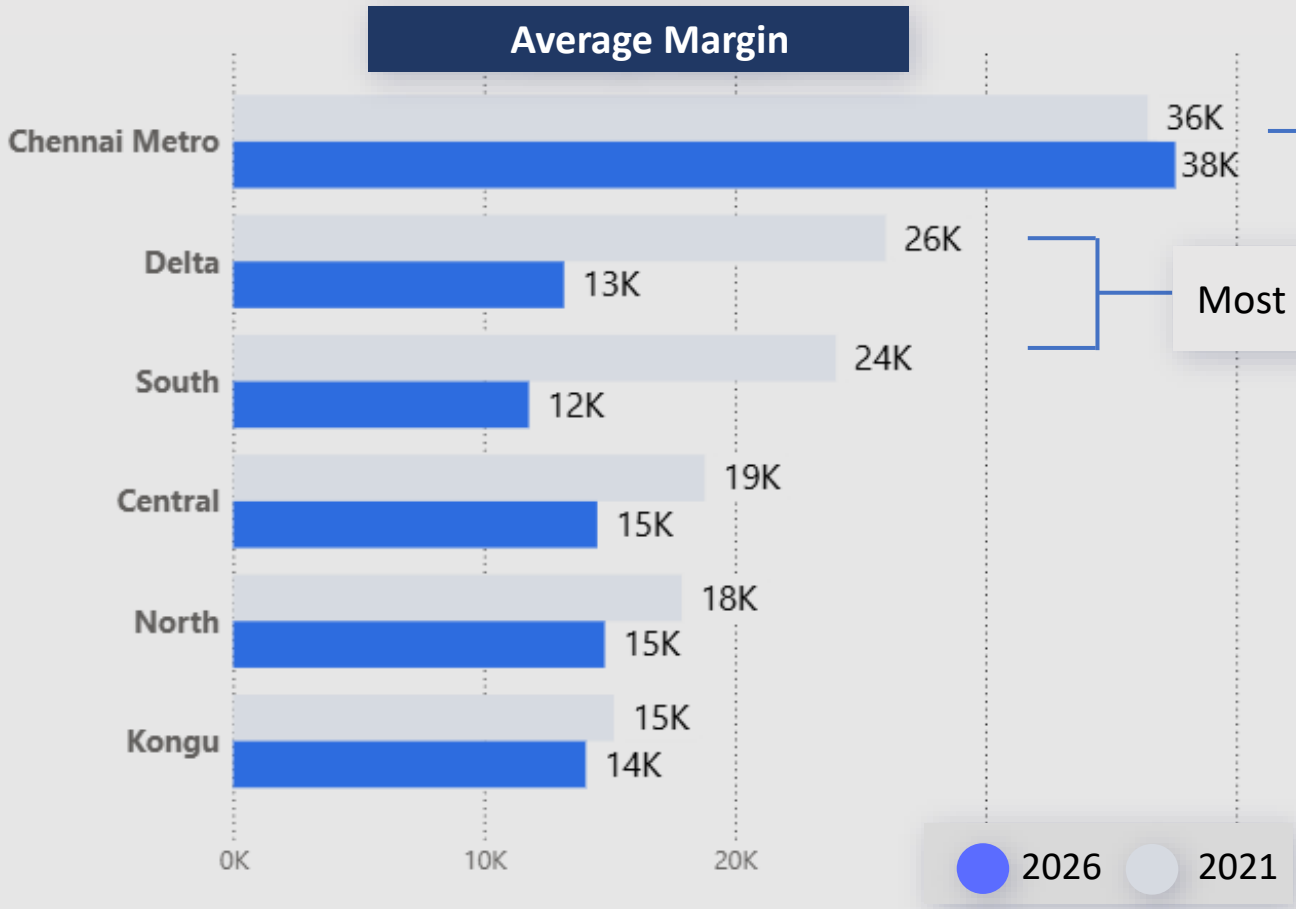

● Flipped ● Not Flipped

Editorial Recommendation

Feature a 'Constituency Spotlight' on the most high-impact seat transfers identified in the data. Transition from statewide aggregate statistics to specific high-flip districts to maintain viewer engagement.

With so many seats changing hands, we must next examine the intensity and closeness of these races

Close Races: Narrowing Gap Between Winners and Losers

The exception - slight increase in margin

Most dramatic compression of victory margins

Across almost all regions, the buffer between victory and defeat shrank dramatically, signaling highly contested, multi-cornered fights

Editorial Recommendation

Feature a segment on the Delta and South regions to show how collapsed margins ended the "safe seat" era

The thin margins are a direct result of how the vote share was divided, which is our next focus.

22871

Average Margin in 2021

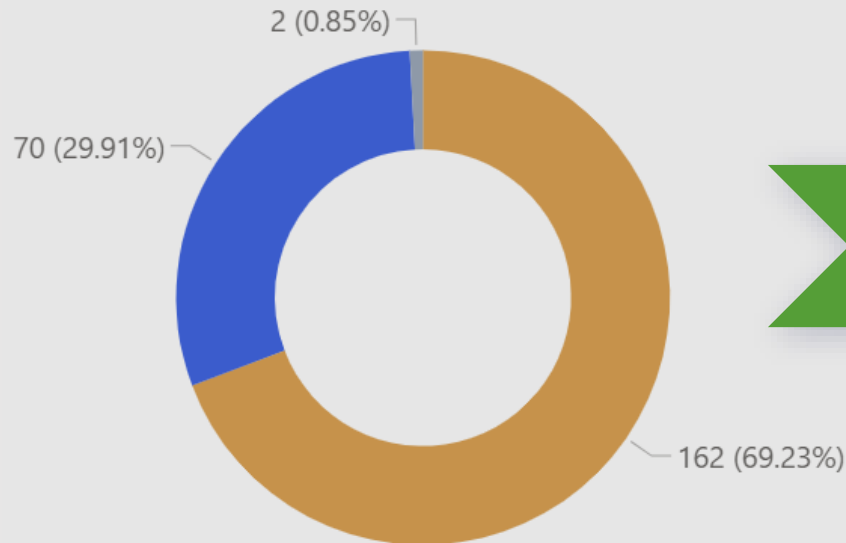

16784

Average Margin in 2026

↓ (26%)

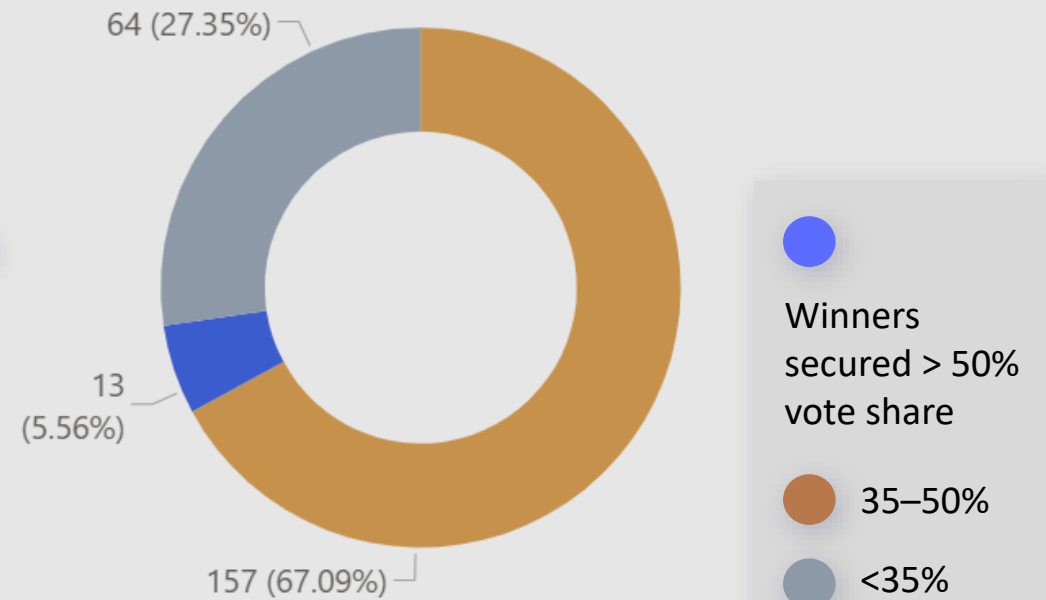

Era of Fractured Mandates — Vote Share Compression

2021 Mandate Strength

The Triangular Contest Effect

2026 Mandate Strength

Not only did seats flip, but they were won with lower vote shares. The 50 percent mandate has ruptured

Editorial Recommendation

Launch a **'Fragmented Verdict'** segment that specifically spotlights the 64 constituencies where winners secured less than 35% of the vote. Contrast this surge (up from only 2 such seats in 2021) with the **collapse of 'Decisive Mandates'**—showing that seats won with over 50% vote share plummeted from 70 to just 13

Storytelling Flow

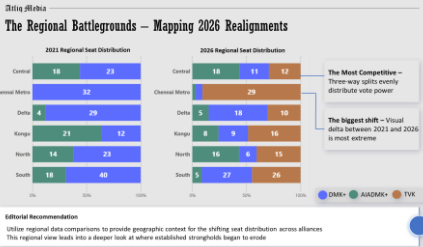

Growing multi-party competition fragmented vote shares

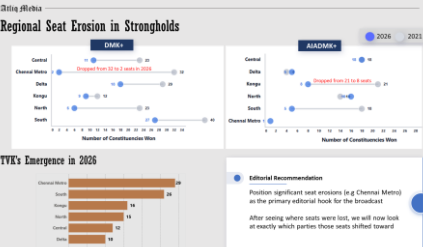

Fragmentation contributed to narrower victory margins

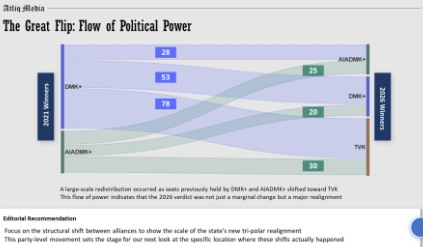

Tighter contests led to more constituency-level winner changes

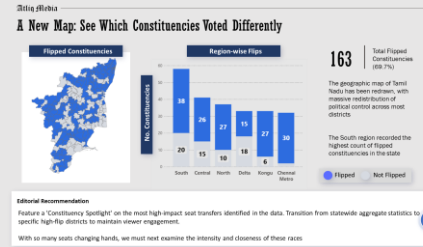

Which parties are now leading in each of the six different parts of the state?

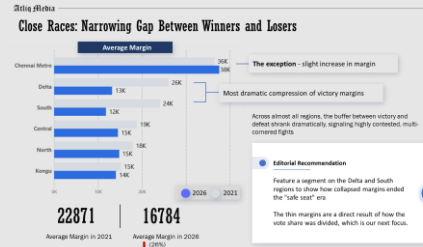

Where did the big parties lose their "safe" areas?

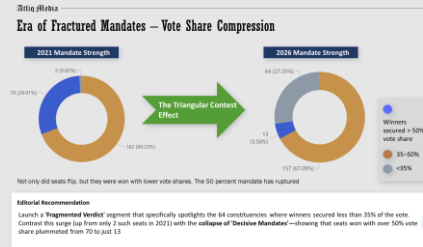

How many seats "flowed" away from the old alliances and into the new one?

Which specific towns and districts changed their minds and flipped to a different party?

How close were the races?

Did the winners get a clear majority, or was the vote split too many ways?

Unassailable, fact-based journalism serves as the AtliQ broadcast standard

Credibility Shield		Headline
What we Used (The Foundation)	What we Excluded (The Noise)	<i>The 2026 election marks the end of the decisive mandate in Tamil Nadu, shifting from a bipolar state to a fragmented tri-polar landscape where traditional strongholds have collapsed and seats are now won with record-low vote shares</i>
✓ Exclusively public Election Commission (ECI) of India data ✓ Analysis anchored strictly on ECI Assembly Constituency (AC) numbers as the primary key	✗ Zero exit polls, surveys, or punditry ✗ Zero predictive analysis or future forecasting ✗ Zero casual interpretation regarding why voters shifted	

Data Limitation –

- Constituency names are not strictly unique in the raw dataset.
- The dataset captures electoral outcomes but does not explain the underlying social, economic, or political reasons behind voter behavior.
- Alliance groupings are editorial classifications created for analysis

Editorial Recommendation

Reinforce the network's commitment to factual reporting by explicitly citing ECI data to maintain 'fact-based' branding.
